Location: Lagos, Nigeria

Summary

Junior Penetration Tester & Red Team Operator with hands-on training in ethical hacking, penetration testing, cryptography, steganography, and phishing simulations. Skilled in identifying and exploiting security weaknesses in web applications, systems, and human processes, and providing clear remediation guidance.

Skills & Tools

- Penetration Testing & Red Teaming
- Social Engineering & Phishing Simulation
- Web Application Testing
- Steganography (hiding/detecting data)
- Encryption & Decryption
- Brute Force & System Exploitation (lab only)
- Tools: Burp Suite, Nmap, Metasploit, Wireshark, Hydra

Selected Projects

CamPhish — Phishing Simulation (Lab)

Designed and executed phishing campaigns in a controlled lab environment. Built cloned landing pages, captured credentials, and documented mitigations including MFA, SPF/DKIM/DMARC, and awareness training.

Steganography Analysis

Implemented techniques for hiding and detecting hidden data in images. Built a basic tool to identify LSB patterns and produced guidance for preventing data exfiltration.

Web App Pentest — Demo E-Commerce Site

Conducted lab-based penetration test, finding XSS and insecure session handling. Delivered a detailed report with proof-of-concepts and remediation advice.

Proof & Certifications

- TryHackMe: Labs & Badges
- HackTheBox: Profile & Ranks
- eJPT (in progress)

Note: All security projects were conducted in controlled lab environments or with permission. Never attempt these techniques on systems you do not own or control.
