

ABODE-U EMMANUEL OSILAMAH

Cybersecurity | Penetration Testing & Ethical Hacking

emmanuelabode79@gmail.com | 09072728984 | linkedin.com/in/abode-emmanuel | github.com/emmanuel1-a

PROFESSIONAL SUMMARY

Cybersecurity practitioner with hands-on experience in penetration testing, web and API security testing, vulnerability assessment, and security monitoring. Experienced with Kali Linux, Burp Suite, Nmap, Metasploit, Splunk, and John the Ripper, with practical work covering API security, access-control testing, phishing simulations, cryptography, steganography, and CTF-based security labs. Currently developing practical offensive and defensive security skills through hands-on training, security projects, and an Advanced Ethical Hacking Internship Program.

TECHNICAL SKILLS

Security: Penetration Testing, Web Application Security, API Security Testing, Vulnerability Assessment, Bug Hunting, Access Control / IDOR Testing

Security Tools: Burp Suite, Nmap, Metasploit, Wireshark, Splunk, John the Ripper

Operating Systems: Kali Linux, Linux

Web & Programming: HTML, JavaScript

Security Concepts: Phishing & Social Engineering, Password Security, Hashing, Cryptography, Cookies & Web Sessions, Steganography

Practical Training: CTFs, TryHackMe, Security Labs

CYBERSECURITY PROJECTS

API Security Testing Lab

Performed hands-on API security testing in controlled environments, focusing on authentication, authorization, access control, IDOR-style vulnerabilities, and remediation considerations.

Web Application Security Testing

Practiced web application security testing using Burp Suite, including request/response analysis, cookies, authentication and session security, and vulnerability identification in controlled environments.

Splunk Security Monitoring Lab

Practiced security log analysis using Splunk, including investigation of failed authentication activity and Windows Event ID 4625 events in a controlled lab environment.

CamPhish — Simulated Phishing Lab

Conducted a controlled phishing simulation to study social engineering techniques, phishing workflows, security awareness, and defensive mitigations.

Encryption & Password Security Lab

Practiced symmetric encryption using OpenSSL AES-256-CBC with PBKDF2, created password hashes on Linux, and performed controlled password-cracking exercises using John the Ripper.

Steganography Analysis

Explored techniques for hiding information in images and investigated methods for identifying and analyzing common steganographic patterns.

EXPERIENCE & TRAINING

Advanced Ethical Hacking Training & Internship Program — KowiX | 3-Month Program

- Completed hands-on training in ethical hacking and penetration testing.
- Practiced reconnaissance, vulnerability identification, web application and API security testing.
- Worked with Kali Linux, Burp Suite, Nmap and other penetration-testing utilities.
- Applied security concepts through practical labs, CTFs and controlled testing environments.
- Developed practical skills in vulnerability assessment, access-control testing, password security and security analysis.

CERTIFICATION

Cyber Security Program — Certificate of Completion

EDUCATION

Osun State Polytechnic, Iree

National Diploma (ND), Computer Science — Completed

Higher National Diploma (HND), Computer Science — In Progress

Security testing and demonstrations were conducted in controlled environments, labs, or with authorization. Security techniques should never be used against systems without permission.
